

8medical (GEYES) — Frontend Test Guide

What the Product Owner can test on the first live deployment

Product: 8medical emergency-care web app (GEYES front-end)

Audience: Product Owner / QA

Build: React + Vite + Tailwind CSS • Repository: GEYES-FRONT

Date: 23 June 2026 • Scope: front-end UI & flows (no backend connected yet)

1. How to read this document

This release is a **front-end build**. Screens, navigation, and interactions are complete and testable. Anything that needs a server (real accounts, live search data, payments, SMS/email) is **not connected yet** — those areas are marked so you test the experience, not the data.

FUNCTIONAL works fully in the browser, no backend needed. **UI / DEMO DATA** looks and behaves correctly but shows sample data. **NOT WIRED** placeholder action; awaits backend.

Access: open the deployed URL in a desktop browser (Chrome/Safari/Edge) or a phone. No login is required to explore — every flow is reachable from the landing page.

2. Landing page

WHAT TO TEST	STEPS	EXPECTED RESULT	STATUS
Top navigation	- Load the home page. - Click each nav item (Home, About Us, Services, Impact, Contact).	Header with logo, links, “Log in” and “Create Account” render and are clickable. Logo keeps correct proportions.	FUNCTIONAL
Hero & quick actions	- Review headline, badges, search bar. - Click the four quick-action cards.	“Find Hospital” opens search results; “Find Blood” & “Find Emergency Medications” open the pharmacy page. “Call Emergency Line” is visual.	FUNCTIONAL
Choose a Service tabs	Click each tab: Ambulance Transport, Standby, Afterlife Transport, Urgent Care.	Content (heading, description, buttons) updates per tab; active tab is underlined.	FUNCTIONAL
Partner logos carousel	- Scroll to the partners strip. - Hover over it.	Logos slide continuously (marquee) and pause on hover.	FUNCTIONAL
Footer	- Scroll to the footer. - Click “Log In” / “Create Account”.	Contact details, services, social links render; the two buttons open the auth modals.	FUNCTIONAL

3. Find Care (search) flow

WHAT TO TEST	STEPS	EXPECTED RESULT	STATUS
--------------	-------	-----------------	--------

Find Care modal	1. Click the hero search bar or "Find Care". 2. Type a condition or click a suggestion chip.	Modal opens with search field, condition chips, and current-location row. Chips fill the search field.	FUNCTIONAL
Change location	1. In the modal, click "Your current location". 2. Type an address or use "Current location", then "Change Location".	A second modal opens on top; the chosen address updates the displayed location.	FUNCTIONAL
Search results page	1. Submit "Find Care". 2. Review the facility grid, filters and the "ATE AI" guidance panel. 3. Use "Go Back".	Results page shows hospital cards + AI emergency-guidance panel. Filters are visible. Results are sample data.	UI / DEMO DATA

4. Find Blood / Pharmacy & cart

WHAT TO TEST	STEPS	EXPECTED RESULT	STATUS
Add to cart	1. Open "Find Blood". 2. Click "Add to Cart" on items; adjust quantities with +/-.	Card switches to a quantity stepper; the cart panel lists items and the subtotal recalculates live.	FUNCTIONAL
Manage cart	1. Use "Remove" on an item and "Clear Cart". 2. Press "Order Item Now".	Items/cart update correctly; Order button is disabled when the cart is empty. Order submission is not wired yet.	NOT WIRED

5. Create Account (registration)

Open via “Create Account” in the header or footer.

WHAT TO TEST	STEPS	EXPECTED RESULT	STATUS
Entity type	1. Pick “Individual” or “Business”. 2. Click “Proceed”.	Proceed stays disabled until a type is chosen. Individual → form; Business → business-type step.	FUNCTIONAL
Business type	1. Choose Hospital / HMO / Corporate / Diagnostics Centers. 2. Proceed.	Each type opens a form with the correct labels (e.g. “Hospital Name”, “HMO Name”). Corporate adds an “Organisation Type” dropdown.	FUNCTIONAL
Forms & validation UI	1. Type in fields; toggle the password eye. 2. Open the Organisation Type dropdown (Corporate). 3. Tick the Terms checkbox.	Fields accept input, password show/hide works, dropdown lists industries, checkbox toggles.	FUNCTIONAL
Submit / Google	1. Click “Create Account”. 2. Click “Continue with Google”.	Account creation and Google sign-up are placeholders pending backend/OAuth.	NOT WIRED

6. Sign in & password reset

Open via “Log in” in the header or footer.

WHAT TO TEST	STEPS	EXPECTED RESULT	STATUS
Sign in screen	1. Review Google button, email & password. 2. Click “Sign up”.	“Sign up” switches to the registration flow; password eye toggle works.	FUNCTIONAL
Reset password chain	1. Click “Forgot Password”. 2. Enter email → “Reset Password”. 3. Type the 6-digit OTP → “Proceed”. 4. Set a new password → “Reset Password”.	Each step advances; OTP boxes auto-advance/back-space and paste; “Proceed” enables only with 6 digits; “Go Back” returns one step.	FUNCTIONAL
Login / OTP delivery	1. Submit login. 2. Use “Resend Code”.	Actual authentication and real OTP email/SMS are not connected yet (any 6 digits advance the demo).	NOT WIRED

7. Cross-cutting checks

- **Modals:** close with the “x”, the “Esc” key, or clicking the dimmed background. Stacked modals close top-most first.
- **Responsiveness:** resize to phone width — layouts reflow; the registration form fields stack and stay within the screen.
- **Navigation:** “Go Back” on results/pharmacy pages returns to the landing page.
- **Visual fidelity:** spacing, colours and typography follow the Figma designs (brand violet, BR Firma where available).

8. Not in this build (awaiting backend)

- Real account creation, login sessions, and Google OAuth.
- Live hospital / blood / pharmacy data — current listings are sample content.

- Sending and verifying real OTP codes (email/SMS).
- Checkout / payment for pharmacy orders.
- “ATE AI” responses are static example copy, not a live model.
- Booking actions (Book Transport/Standby, Book Ambulance Transport) are visual.

9. Suggested test order

1. Landing page tour (nav, hero, tabs, carousel, footer).
2. Find Care → Change Location → results page.
3. Find Blood → add/adjust/remove cart items.
4. Create Account → both Individual and all four Business types.
5. Log in → Forgot Password → OTP → New Password.
6. Repeat the key flows on a phone for responsiveness.

8medical (GEYES) front-end — internal test guide. Status reflects the front-end build only; backend integration changes some “Not wired” items to functional in a later release.
